A Double-Blind Randomized Controlled Trial of SGLT2 Inhibitors in Type 2 Diabetes

Chen J, Kowalski M, Tanaka Y. Chen et al. 2023.

Methods: Randomized controlled trial. A total sample size of N = 450 patients was enrolled.

Results: In the SGLT2 inhibitor group, 25 / 225 patients experienced cardiovascular death, compared to 55 / 225 patients in the placebo control group.
